CS2302 Data Structures
Spring 2020
Python Warmup Quiz

Open notes. You may request assistance from TA, IA, PL, and instructor

1. Write the function replace(S,a,b) that receives a string s and characters a and b and returns a string consisting of replacing all occurrences of a by b in S.
2. Write the function divisors(n) that receives a positive integer n and returns a list of the integers that divide n exactly, in ascending order.
3. Write the function set_largest_to_zero(A) that receives a 2D array A and sets its largest element to 0.
